

Sign Convention:

$$\text{MOMENT (lb}\cdot\text{ft)} = \text{Force (lb)} * \text{distance (ft)}$$

$$\begin{aligned}\text{MOMENT (lb}\cdot\text{ft)} &= 500 \text{ lb} * 4 \text{ FT} \\ &= \underline{\underline{(+2000 \text{ lb}\cdot\text{ft})}}\end{aligned}$$

COUNTER CLOCKWISE MOMENT (+)

C3

## MOMENT OF A FORCE !!

Note: If the "moment arm" (i.e.  $\perp$  distance) is zero — there is

NO MOMENT!

\*  $F_1$  &  $F_4$  HAVE  
NO MOMENT

\*  $F_2$  &  $F_3$  WILL  
HAVE A MOMENT

MOMENT OF A FORCE (I.E. TORQUE)

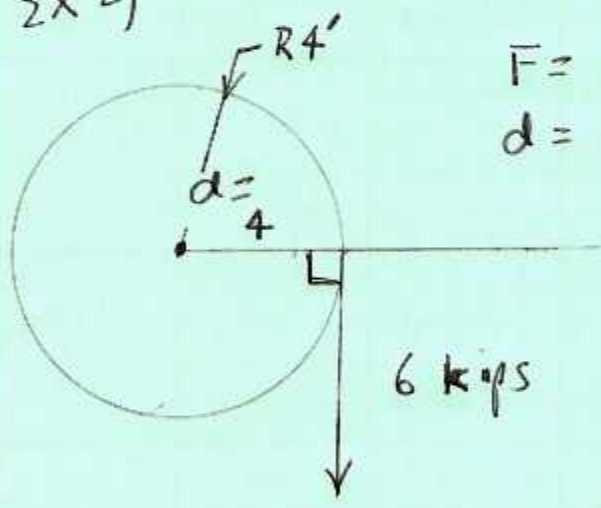

EX 1)

"Torque" or Moment  
 $F \times d$

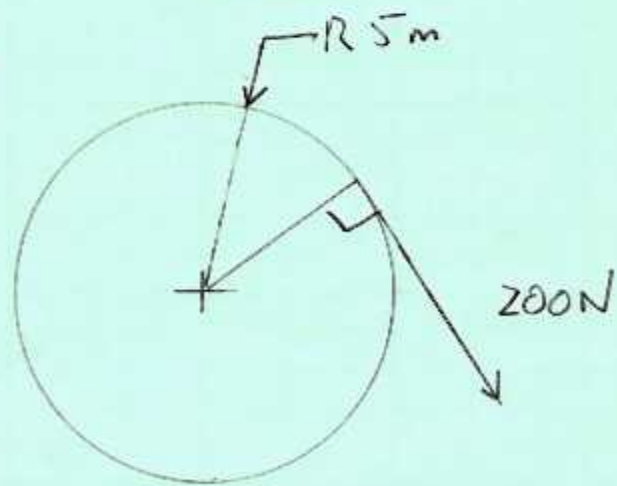

EX 2)

$F = 6 \text{ kips}$   
 $d = 4 \text{ ft}$

EX 3

$\Sigma x 4)$ 

MOMENTS ABOUT POINT "A"

10 kip force:

$$\text{Moment} = \text{Force} * \perp \text{ distance}$$

$$= 10 \text{ kips} * 5 \text{ ft}$$

$$= \underline{\underline{-50 \text{ kips-ft}}} \quad \text{ANS} \quad \curvearrowright$$

6 kip force:

$$\text{Moment (kip-ft)} = \text{force} * \perp \text{ distance}$$

$$= 6 \text{ kips} * 10 \text{ ft}$$

$$= \underline{\underline{-60 \text{ kips-ft}}} \quad \text{ANS} \quad \curvearrowright$$

4 kip force;

$$\text{Moment (kip-ft)} = \text{force (kip)} * \perp \text{ distance (ft)}$$

$$= 4 \text{ kip} * 15 \text{ ft}$$

$$= \underline{\underline{-60 \text{ kips-ft}}} \text{ANS} \quad \curvearrowright (+)$$

Sum Moments About "B"

10 kip force:

$$\begin{aligned}
 \text{Moment (kip-ft)} &= \text{Force (kip)} \times \perp \text{ distance} \\
 &= 10 \text{ kip} \times 15 \text{ ft} \\
 &= \underline{\underline{+150 \text{ kip-ft}}} \quad (+)
 \end{aligned}$$

6 kip force:

$$\begin{aligned}
 \text{Moment} &= (6 \text{ kip})(10 \text{ ft}) \\
 &= \underline{\underline{+60 \text{ kip-ft}}} \quad (+)
 \end{aligned}$$

4 kip force:

$$\begin{aligned}
 \text{Moment} &= (4 \text{ kip})(5 \text{ ft}) \quad (+) \\
 &= \underline{\underline{+20 \text{ kip-ft}}}
 \end{aligned}$$
